Treatment For Closed Soft Tissue Injuries

Туре	Characteristics	Treatment
Contusion	pain and bruising	reassure patient
Ecchymosis	blue/black discoloration	immobilize
Hematoma	pain, swelling and discoloration	ice or cold pack
Edema	pain, swelling and possible loss of function	elevate
		splint
Sprain	mechanism of injury	reassure patient
Ankle	anxiety	gently support the site
Wrist & Hand	point tenderness	note and record CMS
Elbow	swelling and ecchymosis	apply ice pack to sprained area
	pain preventing movement	splint and immobilize injured limb
	instability of joint	elevate injured limb
	guarding	arrange for transport to
		appropriate care center
Strain	mechanism of injury	reassure patient
Back	anxiety	gently support the site
Neck	point tenderness	note and record CMS
Muscle	swelling and ecchymosis	apply ice pack to sprained area
	pain preventing movement	splint and immobilize injured limb
	instability of joint	elevate injured limb
	guarding	arrange for transport to
		appropriate care center
Dislocation	mechanism of injury	reassure patient
Shoulder	anxiety	gently support the site
Knee	marked deformity	note and record CMS
Elbow	swelling	apply ice pack to sprained area
	pain aggravated by movement	splint and immobilize injured limb
	tenderness on palpation	elevate injured limb
	virtually complete loss of normal joint motion	mandatory transport to hospital
	(locked joint)	emergency room
	numbness or impaired circulation	

Special Note: Treat hip dislocations as fractures.
